

KEY OBSERVATIONS SUMMARY

1. The dataset contains 1,200 customer orders and generated a total revenue of \$1,264,761.96, indicating strong overall sales performance during the analysis period.
2. Product analysis revealed that Chair generated the highest revenue (\$195,620.11), closely followed by Printer (\$195,612.61). Phone generated the lowest revenue (\$151,722.39), suggesting lower sales performance compared to other products.
3. Instagram was the highest-performing referral source, contributing \$275,285.45 in revenue, while Referral generated the lowest revenue (\$226,815.58). This indicates that social media channels are highly effective in driving customer purchases.
4. Analysis of payment methods showed that online payments were the most preferred option with 258 transactions, while Gift Card payments recorded the lowest usage with 230 transactions.
5. Order status analysis revealed that Cancelled orders were the highest (250 orders), followed by Returned orders (247 orders). Delivered orders were the lowest (231 orders), highlighting a potential area for improvement in order fulfillment and customer satisfaction.
6. Revenue trend analysis showed fluctuations throughout the year. June recorded the highest revenue (\$170,616.13), while September recorded the lowest revenue (\$69,321.65), indicating possible seasonal variations in customer demand.
7. The analysis suggests that focusing on top-performing products and referral channels while reducing cancellations and returns could improve overall business performance and profitability.

CONCLUSION

The Exploratory Data Analysis identified important trends in sales performance, customer behavior, and operational efficiency. Chair and Printer emerged as the top-performing products, while Instagram proved to be the most effective referral source. Revenue peaked in June and declined in September, indicating seasonal fluctuations. Additionally, the high number of cancelled and returned orders suggests opportunities to improve customer experience and operational processes. These findings provide valuable insights that can support data-driven business decisions and future growth strategies.
